## LABS, E-PRESCRIBING SYSTEMS DRIVE HEALTH IT INFRASTRUCTURE EXPANSION

*Reda Chouffani*

Between the Medicare and Medicaid EHR incentive programs and the pay-for-performance programs for healthcare providers, there has been a very clear increase in EHR systems used among physician's practices. U.S. health IT infrastructure is also growing, driven by e-prescribing systems, computerized physician order entry and lab data exchange.

This increase has created demand for technology infrastructure and services, but also has enabled many physicians to leverage computerized physician order entry (CPOE), e-prescribing, and sharing lab test data features in these systems -- workflows previously marooned in paper files.

According to a 2011 study conducted by the American Journal of Managed Care (AJMC), 57% of office-based physicians use EHR systems, a 12% increase from the previous year. The study gauged the level of clinical information exchange.

AJMC researchers focused on how clinicians exchange pharmacy data and

lab and patient clinical summaries. They concluded that, despite meaningful use certification requirements, not all EHR systems have all the appropriate capabilities to efficiently exchange health information.

Electronic prescribing and lab results were available in many systems prior to the requirements of a certified EHR package. However, a number of physicians are beginning to exchange clinical summaries as well as use CPOE: According to the study, one-third of physicians currently have that ability. I believe the results from surveys such as these will continue to show an increase in that EHR functionality, especially considering some of the additional exchange requirements that will become effective with the introduction of meaningful use stage 2.

But as they increase in quantity, EHRs and applications such as e-prescribing systems will need to keep pace with features that clinicians demand, and will have to offer more interoperability.

## FREE RESOURCES FOR TECHNOLOGY PROFESSIONALS

TechTarget publishes targeted technology media that address your need for information and resources for researching products, developing strategy and making cost-effective purchase decisions. Our network of technology-specific Web sites gives you access to industry experts, independent content and analysis and the Web's largest library of vendor-provided white papers, webcasts, podcasts, videos, virtual trade shows, research reports and more —drawing on the rich R&D resources of technology providers to address market trends, challenges and solutions. Our live events and virtual seminars give you access to vendor neutral, expert commentary and advice on the issues and challenges you face daily. Our social community IT Knowledge Exchange allows you to share real world information in real time with peers and experts.

## WHAT MAKES TECHTARGET UNIQUE?

TechTarget is squarely focused on the enterprise IT space. Our team of editors and network of industry experts provide the richest, most relevant content to IT professionals and management. We leverage the immediacy of the Web, the networking and face-to-face opportunities of events and virtual events, and the ability to interact with peers—all to create compelling and actionable information for enterprise IT professionals across all industries and markets.
